

FOR IMMEDIATE RELEASE

Norwood Printing, a Control Group Company located in Norwood NJ is pleased to announce another expansion of its pharmaceutical circular/package insert capabilities. The FDA Physician Labeling Rule (PLR) requires strict content formatting and layout in addition to a minimum 6-point font size. The requirement for more copy space has driven the need to supply larger sheet sizes while still maintaining typical small fold sizes for package inserts.

Pharmaceutical print industry leader, Norwood Printing has responded with new capacity to provide larger sheet sizes with up to **210** folded and glued panels. The additional capability complements the already extensive technical design and printed production offerings of the cGMP compliant company entering its 40th year serving the pharmaceutical/healthcare industry.

In addition to pharmaceutical product circulars, Control Group also provides pressure sensitive labels, flexible packaging, push through foils and pre-printed thermoformable plastics. A recently expanded and modernized facility is well positioned for continued growth and ready to meet future pharmaceutical industry print capacity demands.
